Skills > Degree

only degree → No job

only Skills → Yes possible

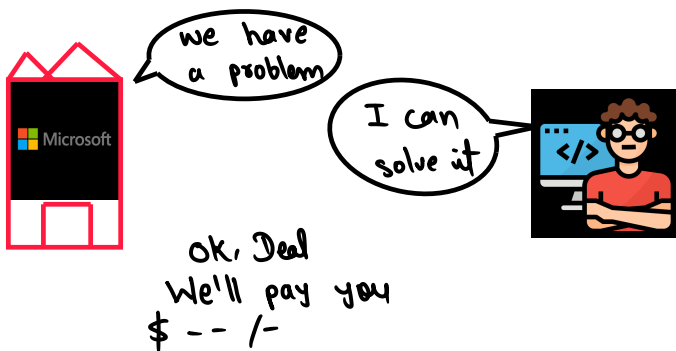

Skills + Degree → 100% job

So

FOCUS on Skills

why you get paid?

- you get paid when you solve someone's problem.
 - when you help someone earn money, He gives you some part of it.
- That's how things work in real life.

In the Cohort 2.0 we'll get

DSA + Web dev + Aptitude + AI + extra (career support,

Resume, LinkedIn, Github)

If no one trusts you now, it's fine trust on yourself and Sheriyans Coding school, and after 6 months, those who wasn't trusting you would want to be Friend with you.

Do's

- Attend Live class daily (8:30 P.m.)
- Daily Study 9:00 am to 9:00 pm
- Ship Projects: Upload every project or program you create on Github.

Dont's

- No backlog piling → Never fall into "Kal Karunga" trap.
- No copy-paste submissions.

How to know you are doing great?

- (1.) You are able to explain code concepts & Trade-offs.
- (2.) Clean README.md file of every project.
- (3.) Every project is getting deployed & is live

- to view.
- (4.) Able to solve DSA medium level questions in $< 30-40$ min.
 - (5.) Able to complete Aptitude timed sets at $> 80\%$ accuracy.

How to watch live classes?

opt-1 Watch live class & code together.
(Good but not best, because coding is easy part, you must focus on understanding the concept, then implement the concepts.) **X**

opt-2 Watch live class, understand concepts, then next day write and implement code & concepts by watching recorded video of live class. (By this way, you would be able to understand concepts better, & you will watch each video twice so it will increase retention of knowledge, and will also boost your recall ability.)

How to be a good learner?

- (1.) ask crisp doubts. (do not ask q's jiska jawab chat GPT ek line me de sakta hai.)

(2.) Post your progress, screenshots on Github, LinkedIn, discord, Instagram etc.,
(do not view likes, just keep posting.)

(3.) Bad days pe bhi live class attend karo.

(4.) Embrace hard, tough topics = Growth

{competition ends at Hard Things}

special Notes

- Don't play victim mode,
- Ask early for help, if you face any problem.

★ If you wanna become an engineer, you don't need BTech degree, you should know how to solve problems.

problem solving ~~~~~> Engineering

★ Don't keep any option 'B'. If you get a problem then solve it, kese bhi karo, research karo, blog padho, video dekho but solve the f**kin problem.
